GARDENING

Seasonal Tips

Top Tips for Spring Gardening from
Enjoy-Work Landscaping & Wildlife Manager.

Watering plants

In these dry conditions you must keep
watering your plants!

See some useful tips and a video about watering plants:

-  It is better to water the garden before drought really sets in, to keep the soil moisture levels even and avoid soil moisture deficits building up
-  Once drought has set in, it is futile to try and remedy this by light watering over a wide area
-  Try to water in the cool of the evening or the very early morning, so that less water is lost immediately to evaporation

video **HERE**

Weeding

Stay on top of Weeding!

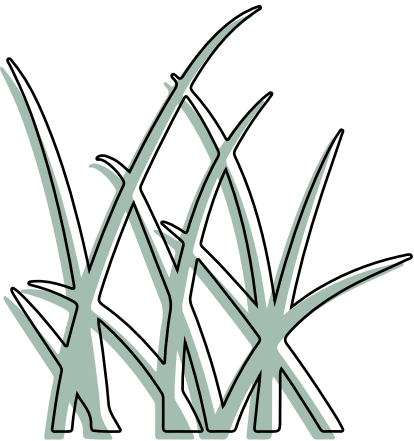

To pull weeds, start by breaking up the soil where the stem meets the top of the soil bed.

Then, grip the bottom of the weed in your hand and pull firmly at a straight angle to remove it by the roots.

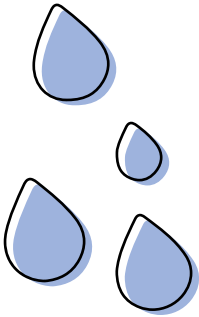

Alternatively, use a weeding tool to dig into the ground and tear out the root.

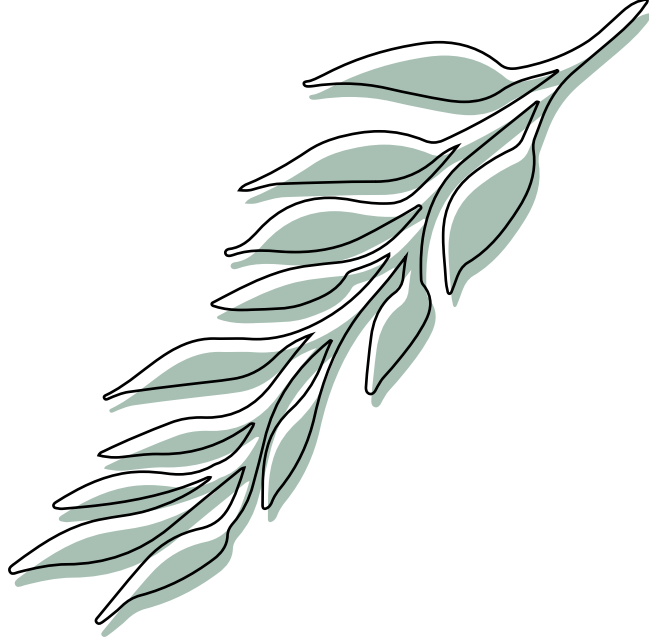

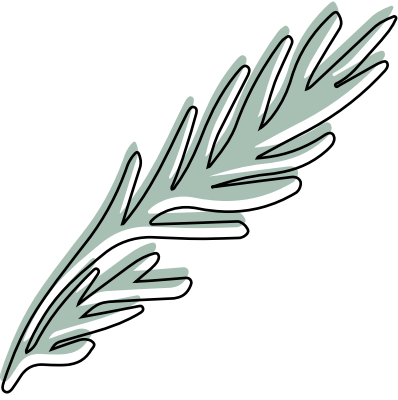

House Plants

**Increase watering
of House Plants!**

Preparing beds

When preparing beds:

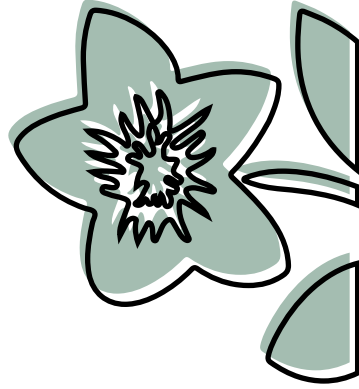

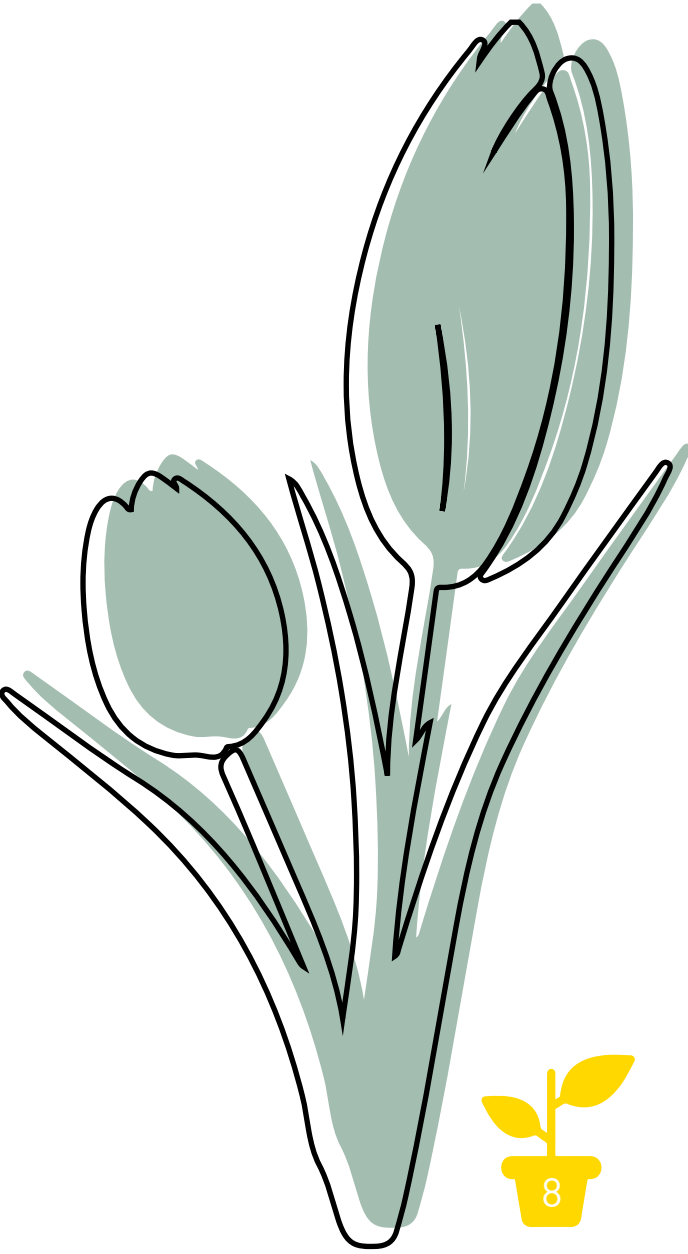

Add compost or well-rotted manure

Or add general-purpose fertiliser such as chicken pellets or fish blood and bones

Deadheads

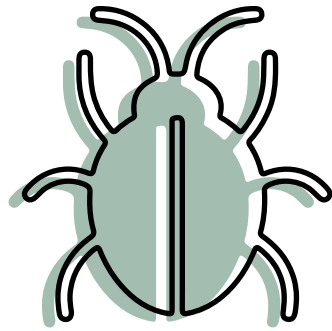

Deadhead daffodils and tulips

as the flowers finish,
but leave foliage intact,
allowing them to die
naturally.

Pests & Diseases

Look out for signs of

pests and diseases,

early prevention is easier than curing an infestation.

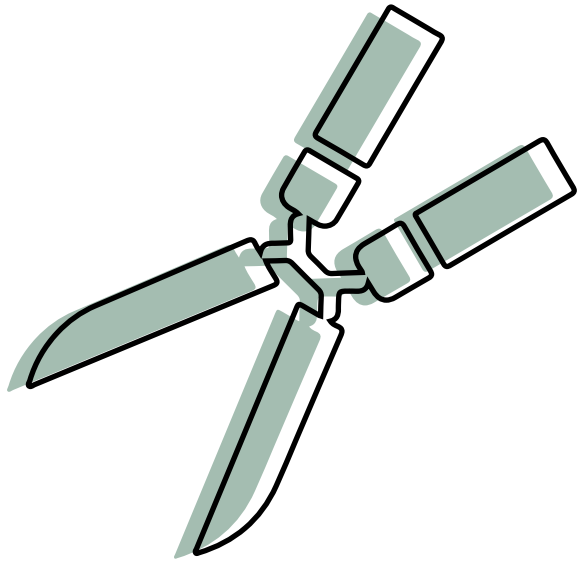

Herbaceous Perennials

Continue to plant herbaceous perennials.

Hedge cutting

When hedge cutting:

-  Cutting straight, crisp edges by eye can be difficult. Use a taut horizontal string tied between two stout canes to act as a guide to cut the top of the hedge level. Canes or stakes pushed into the ground help with vertical lines
-  To shape the top of the hedge (e.g. to an arch), cut a template of the shape required from cardboard or plywood. Place the template on the hedge and cut following the line of the template, moving it along as you proceed
-  When using shears, ensure that the top of the hedge is cut level and flat by keeping the blades of the shears parallel to the line of the hedge
-  When using a hedge trimmer, keep the blade parallel to the hedge and set a wide, sweeping action working from the bottom of the hedge upwards, so that the cut foliage falls away
